# ABOUT US

---

Cooper Trading (International) Limited is a distinguished dental products distributor. Since our establishment in 2008, we have remained committed to delivering exceptional materials and serving as a vital link between doctors and top-notch dental products. As the foremost supplier in the dental industry, we take pride in offering our customers superior products at competitive prices. Upholding our core values of fairness and meticulous selection, we consistently provide clients with professionally certified equipment. With an unwavering emphasis on personalized service and an unwavering commitment to ensuring 100% customer satisfaction, there's no reason to delay—get in touch with us today.

## PIONEER IN INSTRUMENT ERGONOMICS

How to define the ergonomics of a hand instrument? Firstly a non-slip, natural grip on an instrument are essential. Secondly a lightweight and optimized design prevents effectively occupational diseases. Thirdly a good tactile sensitivity and easy handling of the instrument guarantee the best clinical results. Reliability, wear resistance and comfort are the features that will be evident for both, the dentist and the patient. These are the guiding principals how Pekka Kangasniemi, DDS, one of the founders of LM-Dental™, defined instrument ergonomics already in the 1980s.

**ONE INSTRUMENT FOR DIRECT VENEERING**  
LM-Arte™ Solo Anterior

Instrument for high-end esthetic anterior restorations. Rounded and straight spatulas are designed for modeling anterior teeth, especially labial surfaces.

<p><b>Sharp tip</b> Precision modeling Micromodeling Limit marking Scratching</p>	<p><b>Thin blade</b> Proximal modeling</p>	
<p><b>Straight edges</b> Scraping</p>	<p><b>Convex profile</b> One-point modeling Create depressions Create buccal profile Create cervical profile Access difficult areas</p>	<p><b>Sharpened edges</b> Cut, split, separate Marginal ridges</p>
<p><b>Flat profile</b> Flattening Uniform</p>	<p><b>Angled edge</b> Definition Scraping</p>	<p><b>Rounded tip</b> Delicate delimitation Cervical contouring</p>

**ONE INSTRUMENT FOR POSTERIOURS**  
LM-Arte™ Solo Posterior

Instrument for high-end posterior composite restorations. The plugger end is designed for bulk filling and composite material modeling. The sharp end enables contouring of the occlusal surface anatomy.

<p><b>Flat profile</b> Big excess removal Medium excess removal</p>	<p><b>Flat end</b> Plugger</p>	<p><b>4-5 mm bulk-fill safety area</b> Probe for bulk-fill materials</p>
<p><b>Angulation</b> Access for deep cavities</p>	<p><b>Semi-rounded edges</b> Slope forming Excess removal Margin removal</p>	<p><b>Tapered profile</b> Fine excess removal Slope modeling Secondary anatomy</p>
		<p><b>Sharp tip</b> Precision modeling Micromodeling Limit marking Scratching Flow distribution Bubble elimination</p>

**APPLY ELASTICALLY**  
LM-Arte™ Applica

A very thin, flexible spatula designed for transporting and esthetic modeling of the composite. The flexible working end gently and precisely sculpts composite layers to imitate the natural shape of the tooth. The thin tip of the Applica enables modeling in narrow spaces or against the matrix band. Instrument is available with non-stick LM Dark Diamond™ coating.

HOW TO USE

**APPLY WITH A TWIST**  
LM-Arte™ Applica Twist

Especially fine, flexible and narrow spatula for composite modeling. The Applica Twist is used for easy modeling in the approximal spaces and marginal ridges in the matrix. Its bent tips make it possible to reach backward areas without complicating the working position of the hand unnecessarily.

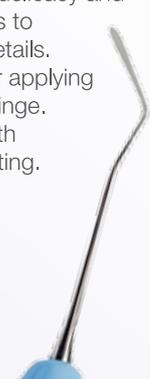

HOW TO USE

**MODEL FLEXIBLY**  
LM-Arte™ Modella

Especially fine, wide spatula for composite modeling. Particularly suited to large tooth surfaces such as the buccal surfaces of the incisors. The wide spatula end flattens the composite effectively. The flexibility, delicacy and sharpness of the tip helps to create precise esthetic details. The spatula works well for applying the composite from a syringe. Instrument is available with LM Dark Diamond™ coating.

HOW TO USE

**PUSH SOFTLY**  
LM-Arte™ Condensa

A long, round plunger designed especially for modeling a composite. Its angulated shanks enable unrestricted access to all cavities. Condensa has both a thick and a thin tip that can be used in cavities of different sizes, in both anterior and posterior areas. The rounded working end enables a delicate compacting of composite without any risk of adhesion. Instrument is available with non-stick LM Dark Diamond™ coating.

HOW TO USE

**APPLY EVENLY**  
LM-Arte™ Misura

A unique instrument used to apply the correct horizontal and vertical thicknesses of composite layers on the anterior restorations. After layering but before polymerization of the dentine composite, the thinner, cylindrical tip is placed on the natural tooth enamel. The unpolymerized composite below the cylindrical tip is then gently modelled, leaving an optimal space for the enamel composite layer. The thicker, short tip of the Misura is placed horizontally at the margin of the prepared cavity, leaving the edge of the tip on the original enamel. This allows you to determine the right amount of transparent composite to apply on the finishing line. The final esthetic restoration consists of correctly balanced opaque and translucent composites, avoiding the unpleasant gray effect of some composites.

HOW TO USE

**FILL EVENLY**  
LM-Arte™ Posterior Misura

Posterior version of the popular Misura instrument. Designed for providing the required vertical thickness of composite layers on posterior restorations. The forked tip of the instrument allows modeling of the proximal wall to match the height and anatomy of the neighboring tooth with the presence of a matrix.

HOW TO USE

**EVALUATE EXPLICITLY**  
LM-Arte™ Cusp Misura

Unique instrument for estimating cusp thickness and height for evaluating the need for cusp preparation when performing adhesive restorations. Ideal for evaluating the strength of the natural tooth structure and choosing the restorative technique to be used. If the forked instrument tip penetrates up to its marks, the tooth structure is too weak to withstand occlusal forces with a direct restoration, and other clinical options must be considered.

HOW TO USE

**NEW!**

**A**dapt

**S**hape

**R**eplicate

LM

**REPLICATE EASILY**  
LM-Arte™ Replica Posterior

Clever instrument designed for simplifying occlusal modeling of posterior teeth in direct composite restorations. The instrument makes occlusal modeling fast, simple and predictable. Occlusal anatomy of single tooth can be made easily guided by the buccal cusps using replica technique with this specific instrument. Instrument has one concave and one convex side.

“  
I can make modeling within seconds with simple steps by using Replica Posterior instrument and technique.”  
Dr. Osama Shaalan,  
Gold Member of Styleitaliano™

**Concave surface**

Marking curve

**Side edges**  
Cutting  
Splitting  
Making lines

**HOW TO USE**

**SCULP DELICATELY**  
LM-Arte™ Fissura

A modeling instrument with extremely sharp pointed tips. The conical tip is perfect for sculpting the anatomy of the occlusal area of the posterior teeth with just one instrument. The fine, probe-shaped tip is optimal for modeling fissures and mamelons as well as for layering characterization composites and sealants. The flexibility of the Fissura enables gentle probing to ensure there is no excess bonding resin remaining on tooth surfaces. Instrument is available with non-stick LM Dark Diamond™ coating.

HOW TO USE

**FINISH NEATLY**  
LM-Arte™ Eccesso

An instrument designed for the removal of composite and bonding residue. The special angulated working ends of the Eccesso are ideal for the removal of excess from cervical anterior and interproximal molar areas. This fine but robust instrument is characterized by the optimized length, thickness and width of its blade. Instrument is available with non-stick LM Dark Diamond™ coating.

HOW TO USE

## LMArte™ Dark Diamond edition

### PLEASANT AND PRECISE SCULPTING OF COMPOSITE

NEW!

LM-Arte™ Dark Diamond instruments are the newest outcome of StyleItaliano™ and LM-Dental™ collaboration featuring exclusive coating for smooth and precise non-stick placement and sculpting of composite resins.

What do the clinical experts say? Scan the QR!

The sensitivity, flexibility and precision are the same as with conventional LM-Arte™ instruments, but the LM Dark Diamond™ coating eliminates the issue of resin sticking to spatulas, even for the most delicate resins.”

Dr. Paulo Monteiro, Honorary Member of StyleItaliano™

### LM Dark Diamond™ offering unique benefits!

- Contemporary diamond-like carbon (DLC) coating reduces stickiness for smooth composite placement
- Hard surface protecting the tip from scratches
- Smooth surface for easy cleaning
- Dark coating color for minimal reflections, and maximal contrast against filling
- Ergonomic LM-ErgoSense® handle for excellent precision and feel

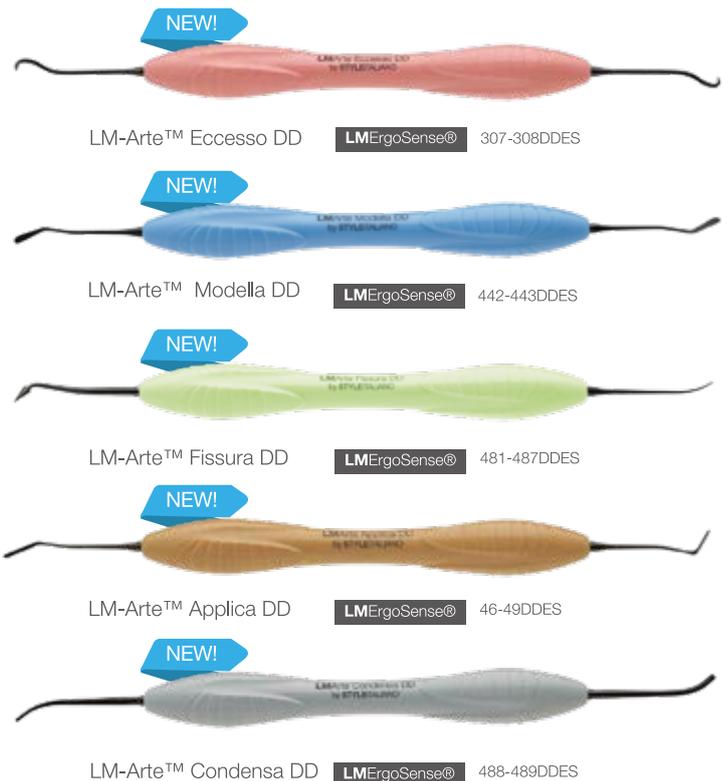

#### LM-Arte™ Dark Diamond set

Set of LM-Arte™ instruments with exclusive non-stick LM Dark Diamond™ coating in LM-Servo™ 5 cassette including Eccesso DD, Modella DD, Fissura DD, Applicca DD and Condensa DD instruments

## SIMPLY CLEVER TIP DESIGN

LM Dual Gracey™ combines the benefits of a universal curette and a Gracey curette in one: Each LM Dual Gracey™ tip has two elliptical cutting edges - a mesial and a distal edge. These instruments are designed for the removal of supra and subgingival calculus from all tooth surfaces. The LM Dual Gracey™ concept, combining Gracey curettes and universal curettes, enables fewer instruments to be used. The traditional set of four Graceys may be replaced with only two LM Dual Gracey™ instruments: Syntette™ and Syntette™ Anterior.

### RECOMMENDATIONS FOR OPTIMAL TREATMENT

# BRACKETS & LINGUAL ATTACHMENTS

## LINGUAL BUTTON

### PLASTIC LINGUAL BUTTON

TOMY

Mechanical lock base can be used with any orthodontic adhesive.

Height is maintained to a minimum and discomfort is reduced. Similar to the Esther MB plastic brackets and Seagull Buttons, PC + PET hybrid plastic is used to provide intraoral durability and aesthetic appearance.

## SEAGULL BUTTON

### SEAGULL BUTTON (Open & Close)

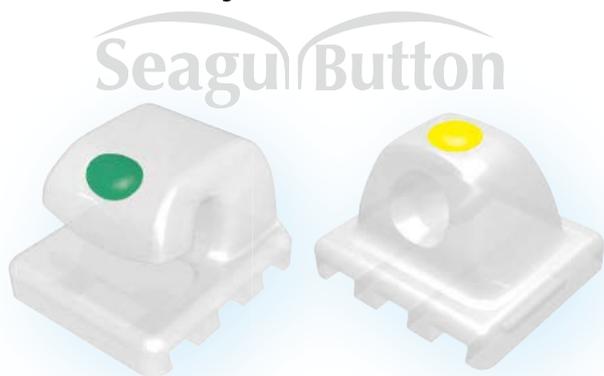

Supervising editor: Dr.Hajime Tamura

Utility attachment

Initial wire can be inserted easily.

For severe crowding where brackets cannot be attached.

Seagull Button

#### Special Features

- Also very useful for leveling.
- Can be used as lingual buttons and cleats.
- Perfect for controlling impacted and linguoversion teeth.
- A mechanical lock base has been adopted for bonding, allowing the use of any type of orthodontic adhesive.
- PC + PET hybrid plastic is used to provide intraoral durability and aesthetic appearance.

For sectional Arch

For brackets cannot be attached case

For heavy crowding

For linguoversion teeth

# WIRES & WIRE PRODUCTS

## SENTALLOY Super Elastic Nickel Titanium Alloy

### ARCH WIRES

TOMY

- Low friction-Sentalloy wires have extremely smooth, polished surfaces minimizing friction between the bracket slot and the archwire, thus facilitating quick and comfortable tooth movement.
- "Optimal force-Continuous light forces maximize the activity of osteoclasts and osteoblasts, creating ideal biological conditions for tooth movement.
- Versatility-There is a suitable wire for every purpose. Round wires are available in five different dimensions and rectangular wires in six dimensions, furthermore, each type of wires is available with differing force values: light, medium and heavy for round, and heavy for rectangular. The optimal orthodontic force can therefore be chosen to meet requirements of each patient.

#### Round Arch

## NEO SENTALLOY Super Elastic Nickel Titanium Alloy

### ARCH WIRES

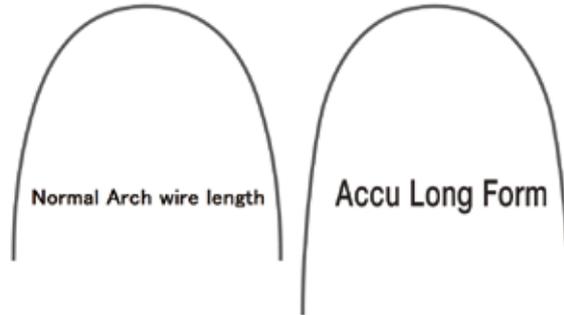

- This extremely soft rectangular wire can also be used as initial wire. Three-dimensional control is possible from the initial period of treatment.
- There is nearly no elasticity when used at low temperature. With this properties, it allows to be applied to cases of severe crowding.
- In adults, even if the periodontium is compromised, Neo-Sentalloy can be used with confidence.
- The surface finishing is extremely smooth in comparison with other conventional Ti-Ni alloy wires, resulting in little friction with the bracket slots and smooth tooth movement.

# Aqualine LC

Light Cure Orthodontic Adhesive

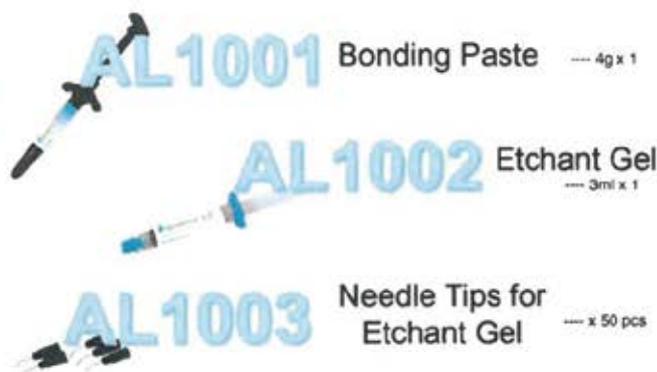

Aqualine LC - 2 Steps Only! - Etch & Bond

## AL1000

### KIT SET

- Bonding Paste ..... 4g x 2
- Etchant Gel ..... 3mL
- Etchant Gel Needle Tips ... 5 pcs

## What is Aqualine LC

Aqualine LC is a light-cure adhesive resin for orthodontic, which bonds metal, ceramic and plastic brackets to tooth surface.

## Features of Aqualine LC

### ● Easy to use

Bonding Paste can achieve strong bond to etched enamel **without priming** as required in most other orthodontic adhesives. So, you can reduce your chair time.

### ● Excellent adhesion to the teeth and bracket

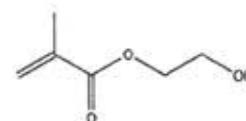

Bonding paste containing adhesive monomer, therefore it can **chemically bond** to both the teeth and bracket\*. \*Except polyamide

### ● Bonding performance is stable in a moist condition

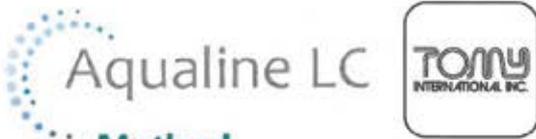

Bonding paste contains hydrophilic monomer (HEMA), so it is possible to penetrate the tooth **even under humid conditions**.

Hydrophilic monomer ⇒ Can penetrate to the teeth

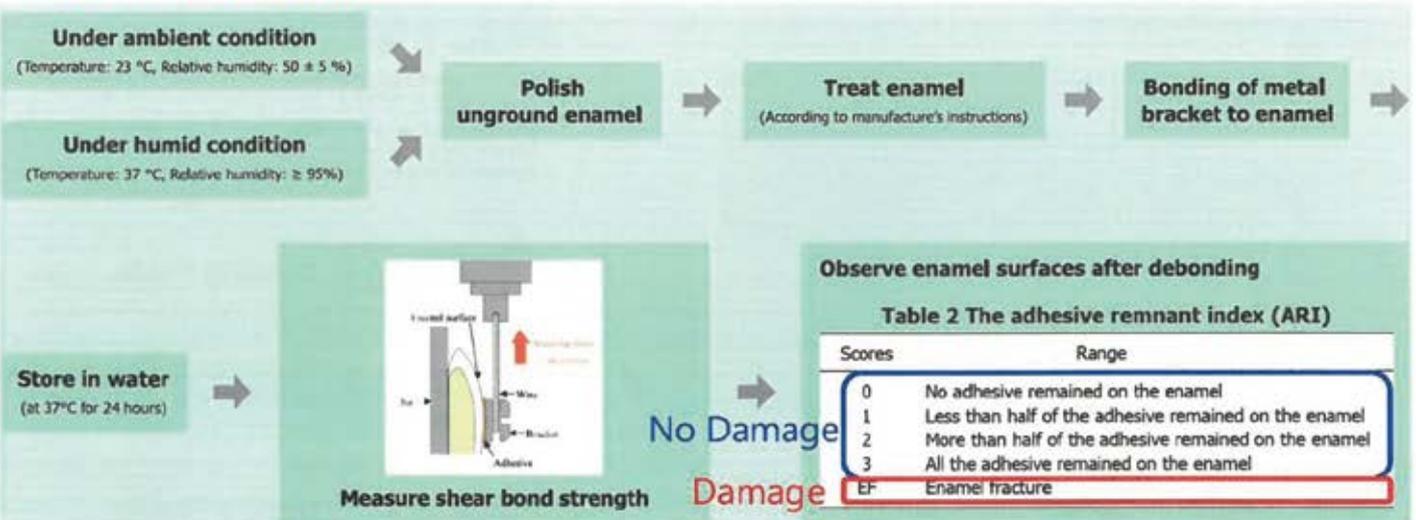

2-Hydroxymethyl methacrylate (HEMA)

### Method

Evaluate the bonding performance of two orthodontic adhesive systems by shear bond strength (SBS).

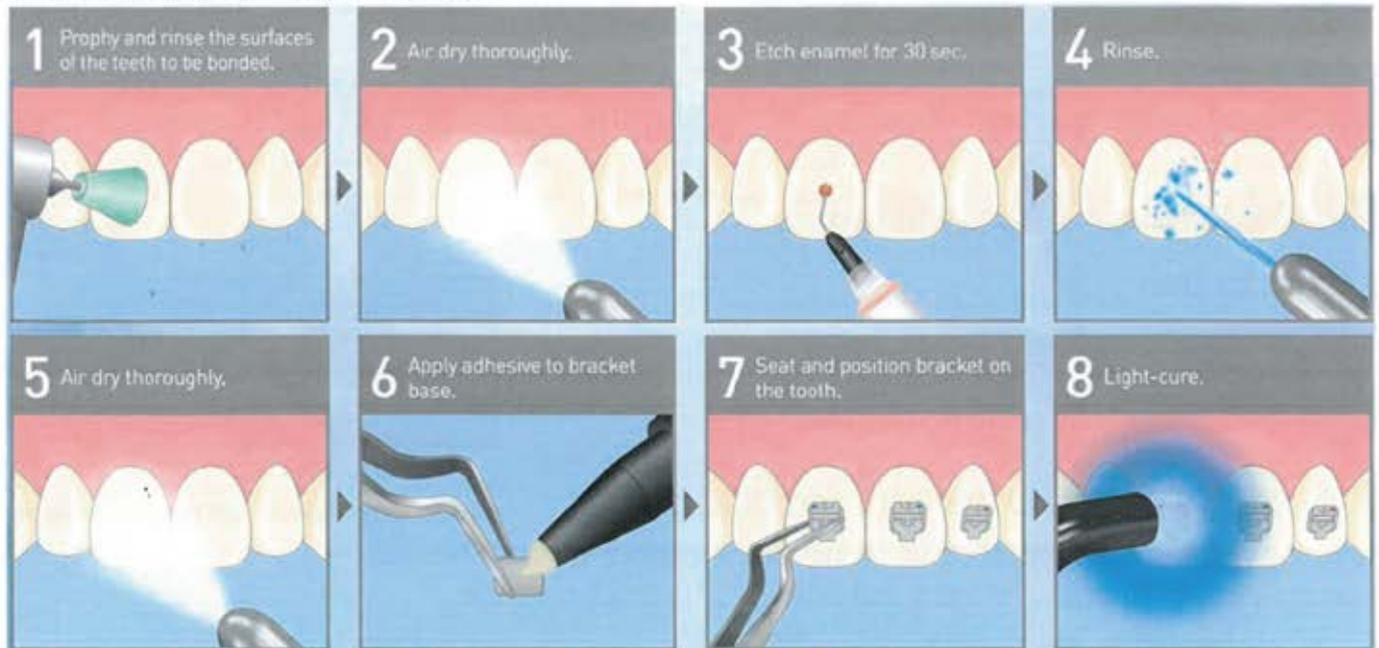

### Flow of test execution

Aqualine LC was superior to Competitor Brand in terms of SBS under the humid condition which is close to a clinical environment.

Therefore, it is concluded that Aqualine LC is a more useful orthodontic adhesive system for clinical use.

### Direction for Use

Type of bracket	Light curing condition
Metal bracket	Both mesial and distal sides ; 10 sec. each side
Ceramic and plastic brackets	Perpendicular to bracket surface; 10 sec.

**eastek**<sup>TM</sup>**SECTIONAL MATRIX SYSTEM****A3**

Separating teeth without overhang,  
delivering perfect retention and tight contact

**EASTEK**

- Matrix Bands M4 : Deciduous teeth 10pcs, Premolar 15pcs, Molar 15pcs, Molar with extensions 10pcs;
- Clamp Ring R5 1.0 small : 1pc, Clamp Ring R5 1.0 medium: 1pc;
- Diamond wedges W4 2.0: 5 models, 16 pcs each;
- Adaptive wedges W3 1.0: 20 pcs;
- Wedge guards M3 1.0: 3 models, 5 pcs each;
- Instruments: 1 pcs of forceps.

FG	806.314.167.524		D.859L_FG	010

Pack of 5

- Consistent grit size and friction grip
- Excellent diamond particle exposure For use with high speed handpieces
- Head length 11.5 mm
- Autoclavable up to 250° F/121° C
- Dry heat sterilizable up to 340° F/170C
- High speed
- Made in Germany

It is recommended to begin with the medium diamond to quickly remove the required amount of enamel for interproximal reduction or IPR. Follow up with the fine diamond to smooth the tooth surface creating a precise, parallel end result.

## Multi-Adjustable Facemask

## Extracting Forceps Claw

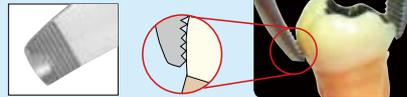

### [Evolved Extracting Forceps]

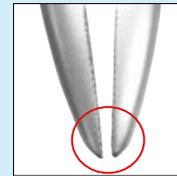

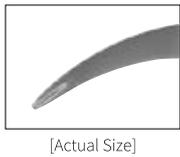

3 or 4 claws always hold any tooth cervix dynamically well. Therefore this forceps are suitable for any shape of tooth cervix.

### [Rough Surface inside the Tip]

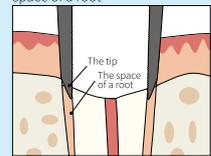

The fulcrums of claws and the edge of rough surface inside the claws make holding power more stronger. Therefore this forceps prevents Dr. from putting too much power on this forceps and this efficiency makes it possible to extract such as fragile tooth or damaged one.

## Extraction Forceps for Root Type-2

The sharp tip is designed for approaching the narrow space of a root

The image of approaching the space of a root

The back of the edge is suitably thin to approach the space of a root.

Even a remaining root is fragile, The serration holds it without putting too much power.

The neck is slender and long enough to avoid adjacent tooth.

## Photographic Mirror

YDM

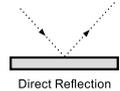

### -Stainless Steel-

\*Use of stainless steel avoids breakage, allowing long term use of the mirror.  
 \*Sterilization pouch included.  
 \*In sterilization, put mirror into pouch without disposal sterilization pack.

No.	Description
13266	ST Occlusal Wide LL
13264	ST Occlusal Wide L
13265	ST Occlusal Wide S
13261	ST Occlusal
13262	ST Lingual
13263	ST Buccal

### -ST-

\*Without Rodium Coating  
 \*Economy Type  
 \*Reflection rate / About 65%

\*Bended design for keeping fingers out of your clinical photographs.

\*\*"Occlusal Wide LL" and "Occlusal LL" Mirror is ideal for taking a photograph of "Margin" and "Buccal mucosa" even the patient has wide dental arch.

## Root Tip Elevator

\*This thin tip of the elevators has easy access to stricture periodontal ligament gaps.  
 \*You can choose one of the most suitable elevators with many types of angles, depending on angle, mouth-opening capacity or condition of remaining roots.

\*The straight type is preferable, which is able to align the line of the tip in that of a front tooth. When it come to molar teeth, it is surely effective for the first broadening of the periodontal ligament gaps as well.

\*It is relatively difficult to align the line of the elevator's tip in the line (axis) of a molar tooth. So choose the appropriate one of the 2 curved elevators, depending on the position of the target root and type of patient's mouth.

\*Choose one of the 2 types of reversed tip elevators, 15 or 30 degree, in case you insert the elevator from the molar, tongue, or roof side.

\*Choose 2A or 3A, especially for those who can't open his mouth widely.

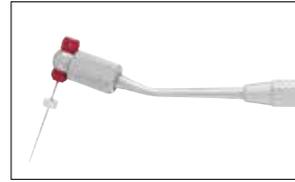

## File Holder Type-2

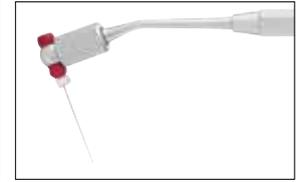

\*Excellent for use in hard-to-reach posterior teeth.

\*Applicable for root canal treatment of both mesial and distal.

No. 08064

## Matrix Retainer Set

Autoclavable  
up to 135°C

Contents Main body / Band (10 ea.)

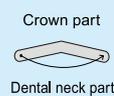

No. 13170

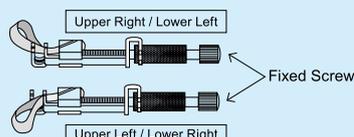

Thickness / 30µm

- How to use -

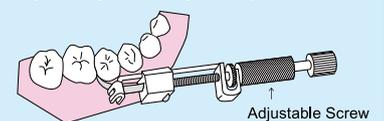

1) The both ends of a matrix retainer band are united and made a ring.

2) The matrix retainer band which became a ring is inserted in a matrix retainer and a fixed screw is tightened.

3) Apply to the target tooth and tightened adjustable screw.

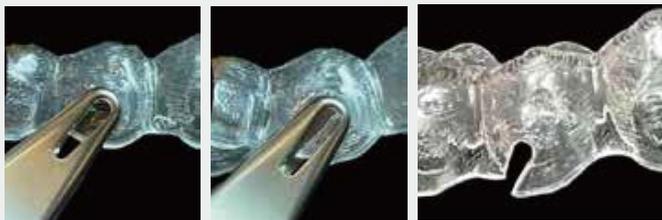

# Orthodontic Pliers **EVER** Fine

## -Aligner Pliers-

- \*With fine tips to ensure to insert into lingual or narrow part, crowded teeth.
- \*With long handle to ensure to insert into lingual or narrow part, crowded teeth.
- \*Matte surface can avoid reflection of pliers under bright light.
- \*Supple curved handle fits female dentists.

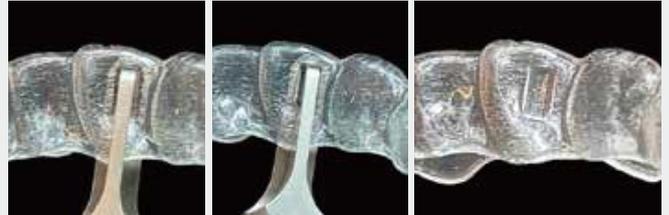

**448**  
**Tear Drop**  
**No.27448**

\*For making a slit to apply elastic with aligner. Excellently sharp cutting so it doesn't make rough surface, which avoid cutting of elastic.

**449**  
**Vertical**  
**No.27449**

\*For making a vertical hollow to apply torque to mesial or distal part of lingual or buccal side of aligner. Thin and slim shape of tip is designed for easy approach even to narrow incisal margin part, especially lower anterior.

**463**  
**Round Former 1.0**  
**No.27463**

\*For making 1.0mm circle hollow to narrow part of aligner such as lower anterior to apply rotation or torque. Also for making additional hollow to the hollow applied by Vertical or Horizontal pliers for more rotation or torque.

# Orthodontic Pliers **EVER** Fine

## -Aligner Pliers-

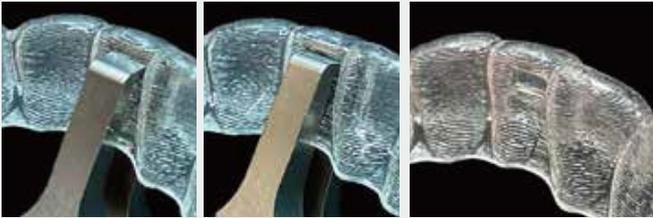

- \*With fine tips to ensure to insert into lingual or narrow part, crowded teeth.
- \*With long handle to ensure to insert into lingual or narrow part, crowded teeth.
- \*Matte surface can avoid reflection of pliers under bright light.
- \*Supple curved handle fits female dentists.

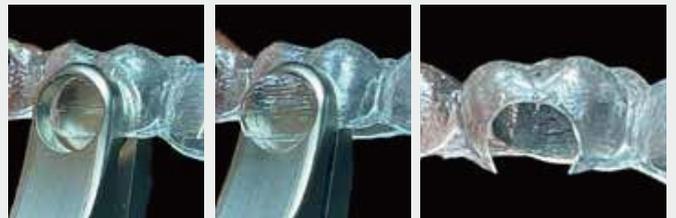

**450**  
**Horizontal**  
No.27450

**451**  
**Hole Punch**  
No.27451

\*For making a horizontal hollow to apply rotation to lingual or buccal side of aligner. Thin and slim shape of tip is designed for easy approach even to narrow incisal margin part, especially lower anterior.

\*For making a hole to apply lingual button with aligner. Excellently sharp cutting so it doesn't make rough surface after making a hole. Slim shape of tip is designed for easy approach to the narrow space such as molar part which has low height.

**464**  
**Round Former 2.0 SM**  
No.27464

\*For making "2.0mm" circle hollow to narrow part of aligner such as lower anterior to apply rotation or torque. Also for making additional hollow to the hollow applied by Vertical or Horizontal pliers for more rotation or torque.

**444**  
**Bracket Removing**  
No.27444

- \*For removing "attachment" of aligner efficiently.
- \*Please use bur in case attachment remained a little after using this pliers.

## Deep Retractor SU

This unique "Deep Retractor" retract the buccal mucosa of molar part for upper and lower with clear view.

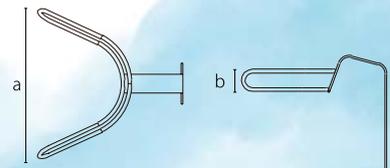

- Clear view even for the second molar part.
- Excellent work for scanning as well.

Adult

Child

No.	Description	Size (mm)	
		a	b
22723	Deep Retractor SU Adult	80	12
22724	Deep Retractor SU Child	67	9

\*This dental-arch shape retract the buccal mucosa of molar part.

\*Patient can hold the handle while operation and the handle is designed not to bother photographing.
